Airtel online recharge using amazon pay

While most of our favorite apps and services are free, some of our most beloved online services are the ones we're willing to upgrade or pay for. In this way it supports developers and also gives us some great premium features. Here is a look at the top ten online services that are actually worth the price. As we prepare to say thank you for our delicious Thanksgiving dishes (and upcoming coma food) Read moreLast week we asked you to share what online services you currently pay for, and now we're back to share universal favorites. Here they are in the queue of popularity:We love free stuff, especially free apps and services. But sometimes you have to do a little pony... Read moreNetflix: This movie rental and streaming service was by far the main recommendation and it's not hard to see why. Netflix is affordable, has a huge movie library and can stream on so many different devices. It was also recently the best reader choice for the best web video service. G/O Media can get commission2-Pack: Juku STEAM Encoding Kits Finding videos on the web isn't the job it used to be. Last week we asked you to share your Read moreAmazon Prime: Fast 2-day shipping from amazon superstore is also great value if you and your family buy a lot of merchandise from Amazon. The added bonus of instant video streaming for Prime members is an added boost. (You can also get Prime for free with a student EDU address or parenting.) Amazon offers students with a valid .edu email address a free year of Amazon Prime, which... Read moreLastPass: One of our favorite password managers, LastPass is a simple, any-browser, any-OS password solution. Premium only features, which cost \$12/year, give you access on your mobile phone, no ads, USB usb drive authentication and more. Click to view You have enough to track your daily life without filling your head... Read moreXmarks: Another handy utility worth paying for (and LastPass companies), Xmarks syncs your tags on browsers and platforms. In fact, it was previously named the best tool for the tag management business. Premium subscribers can use XMarks on iOS, Android and BlackBerry; see their tags on Dolphin Browser HD; and get a longer backup/restore history. Last week we asked you to share your favorite tagging tool, and then we rounded up the results... Read moreDropbox: File sync tool that we pretty much mentioned. In addition to synchronisation and security support for your belongings everywhere, there are other practical ways to use Dropbox. Upgrade to a higher plan (\$10/month for 50GB, \$20/month for 100GB) for more storage than the free 2GB (or check out our cheapskate guide to getting more Dropbox space). The free Dropbox utility is great at syncing files between computers, there's a lot more potential... Read moreXbox Live: Xbox LIVE gold and family memberships lets you play games online with friends, watch movies from Netflix and Hulu Plus, watch live sports from ESPN and 1 So it's pretty much daoded for Xbox fans. Hulu Plus: Subscribing to this TV streaming service is a great way to cut cable. The \$8-a-month Plus service gives you multiple devices from which to watch all episodes of the current season, HD, and exclusive content. Flickr: Pro account (\$24.95) on photo-sharing website Flickr gets unlimited upload and storage (versus a 300MB upload limit), account statistics, image archiving and photo replacement, and more. Pandora One: Pandora's phenomenal online music service is limited for free users to 40 hours a month. Pandora One services gives you unlimited listening, no ads and fewer interruptions, as well as higher quality audio for \$36/year. Evernote: One of our favorite messaging tools and web clip, Evernote can be worth upgrading from \$5/month (\$45/year) to Premium for you if you upload a lot of large files, want to sync files other than images/audio/ink/PDF, or need more collaboration options. Google Storage: If you need more gmail, Google Docs, and/or Picasa web album space, adding additional Google storage is pretty cheap. For \$5/year you can get 20GB of storage, with plans going up to 16 TB of space. The above services are just the favorite online services that readers pay for and some of the reasons why premium plans are worth it. If you have second thoughts about these or different online services, the comments are wide open. Melanie Pinolu, author of this post, can be followed or contacted on Twitter. We love free stuff, especially free apps and services. But sometimes you have to pony up a little money to get premium features -- and sometimes these features are more than worth the money. We want to know: What online services do you pay for? You have a lot of things to spend your hard-earned money on, so today's episode of Lifehacker Read moreAfter reading Duck Duck Go founder Gabriel Weinberg's post on online services he pays for, we have to ask the same thing about you, our readers. Cloud storage services like Dropbox are one example of a kind of online service that many people pay extra for (because they need more space to back up important files). Sometimes, too, you have to pay for the premium service option to get more functionality, such as offline laptops for mobile devices in Evernote. Other online services, such as Amazon Prime shipping, are more perks than essentials, but it's still worth the cost to many people (although you can even get Prime for free if you have an EDU address or child). With Amazon's recent entry into consumer cloud storage, we have plenty of competitors offering... Photo remixed from original by mattiasOnline services provided | Gabriel Weinberg's blog You can contact or follow Melanie Pinola, author of this post, on Twitter. Amazon has gone beyond e-commerce to take a giant stake in the retail market. With your Millions of U.S. Prime subscribers who spend an average of \$1,300 a year, Amazon has a solid customer base. Now that so many items are available for two-day shipping, Prime customers often choose to buy items on Amazon rather than through other websites. One of the best things about buying on Amazon is that your payment details are stored securely, which puts most purchases just a few clicks away. This setup is perfect in an environment where shoppers regularly shop, but many online stores don't have anywhere near this kind of repetitive customer base. By offering Amazon Pay at the checkout, even your small business can offer the convenience of Amazon Pay while keeping customers on your website. If you're interested in increasing sales this year with more payment options, you might want to consider Amazon Pay. Amazon Pay debuted in 2007 to help customers safely pay for purchases outside of Amazon. When a customer buys from a site that has an Amazon Pay button, the site uses payment information stored on Amazon to process payments. This functionality allows users to make purchases on multiple sites without entering their credit card information. To get started, navigate to pay.amazon.com and select merchant. Amazon will ask for some information to help set you up and then provide an add-on that you'll need to install for the feature to work. Once in place, visitors to your site will see a button at the checkout allowing them to pay using Amazon Pay on their desktop or mobile device. After installing Amazon Pay, you will pay a processing fee of 2.9 percent on each transaction. There is also a \$0.30 authorization fee. Companies outside the United States will pay a processing fee of 3.9 percent. Amazon Pay has been growing in popularity over the years, but still faces stiff competition from PayPal, another safe payment option for your e-commerce business. Google Wallet, now called Google Pay, is also a viable payment option, especially for Android users who have their data stored with the company. These are all great payment options for your customers. PayPal reaches a wider audience than either Amazon or Google Pay, winning 67.5 percent of the market, compared to just 1.59 percent for Amazon. The more customer-friendly the company, the more likely users are to complete the transaction. Amazon Pay includes Amazon's large customer base and offers stores of all sizes the ability to accept payment information through the interface while increasing customer convenience. In another attempt to move Amazon.com (NASDAQ:AMZN) from a computer room to the living room, the Wall St Journal reported Tuesday that the e-commerce giant is courting several entertainment companies over the prospect of licensing their television channels for a new internet pay-TV service. Amazon already offers its Prime customers the use of Prime Instant Video service - library TV shows and movies on demand for subscribers - but the company has not yet secured a connection with media companies that would allow it to offer live TV channels like those currently available on cable or satellite. It's a tough market for Amazon to crack because the company already faces significant competition from rivals going after the same TV gold. Sony Corp. (NYSE:SNE), Google (NASDAQ:GOOG) and Intel (NASDAQ:INTC) are among the few that have worked to increase their presence in the pay-TV world, and media companies are still showing a reluctance to field any deals because they do not want to risk harming current pay-TV providers, which are currently boosting the entertainment industry. Still, according to the Journal, informed sources say Amazon has reached out to at least three major media conglomerates seeking the rights to distribute its channels over the Internet, and the company is also in the midst of developing a set-top video streaming box. The Seattle-based company has an advantage over its competitors thanks to a number of relationships it nurtures with TV networks and studios, but those companies looking to launch new services have still struggled to negotiate terms that allow them to competitively price their services, and Amazon may face the same fate. There are certainly drawbacks to Amazon launching an online pay-TV service, as journal points out that it is likely to translate into higher content licensing costs for its streaming video business. However, some analysts have already identified other routes Amazon could work to make money on its TV venture, and therefore higher costs could ultimately pay off. In addition, if Amazon is truly interested in the pay-TV market, it may also be affected by a federal appeals court ruling this month that may overrule net neutrality rules, allowing broadband providers to charge content companies fees for quality service through their networks. Netflix (NASDAQ:NFLX), Google (NASDAQ:GOOG), and now even Amazon may have to adjust its business models for its streaming video services following a court ruling, and this could affect how Amazon moves forward with its TV services venture in the future. The biggest news currently surrounding the pay-TV market is the newly minted deal secured between Intel and Verizon Communications (NYSE:VZ). Intel announced Tuesday that it has sold its Internet TV-related technology to Verizon for a dollar amount that remains undetected, and sources are clearing that this could allow Intel to offer its own online pay-TV service in the future. So it's clear that the TV market is evolving rapidly and tech giants are working to get their foot in the door while they can, and Amazon, Intel, Google and Sony are now just some of the rumors that companies are ready to start securing some jobs before it's too late.
